Development Projects

Weather App

Nov 2022 - Nov 2022

[Github Link](#)

[Live Demo](#)

- **Features:** It provides accurate forecasts, including temperature, humidity, wind speed, and precipitation. The app provides real-time weather updates for almost every city.
- **Implementation:** When searched for any city, data is fetched with the help of an API that returns the weather conditions of that region. The API returns various data elements like humidity, temperature, sunrise, sunset, etc.
- **Tech Involved:** HTML, CSS, JavaScript, Bootstrap

Guessing Number Game

Dec 2022 - Jan 2023

[Github Link](#)

[Live Demo](#)

- **Features:** The game gives 10 chances to guess the correct number. The correct number is between 1 to 20. If run out of chances the game asks for a restart.
- **Implementation:** When a number is entered that entered number is checked with the correct number. If the entered number is wrong, the background changes to red, and if the entered number is correct, the background changes to green.
- **Tech Involved:** HTML, CSS, JavaScript.

UI/UX Projects

Portfolio design

Aug 2023 - Sept 2023

[Figma link](#)

Made the design for portfolio, very elegant and user friendly.

- Started my designs with research and sketches.
- Then, I make the prototypes of the portfolio.
- Finally, after some refining made the final design.

Product designs

Sept 2023 - Oct 2023

[Figma link](#)

Made the designs for login process, product designs and e-learning website.

- Started with some user research like it's a platform for students and teachers.
- Then, move towards sitemaps, user flows, wireframes and prototypes.
